

PH2420 Electromagnetism

Contents

1 Introduction

- 1.1 Overview
- 1.2 History of the ideas of electromagnetism
- 1.3 Structure of the course
 - 1.3.1 Fields and matter
 - 1.3.2 The path to Maxwell's equations

2 Electrostatics I

- 2.1 Coulomb's law
- 2.2 The electric field
- 2.3 Linearity and superposition
- 2.4 Lines of force – electric flux
- 2.5 Gauss's law
- 2.6 Work in an electric field
- 2.7 Electric potential
- 2.8 Calculation of \mathbf{E} from V
- 2.9 The capacitor
- 2.10 Electric field energy

3 Vectors

- 3.1 Vector algebra
 - 3.1.1 Vectors
 - 3.1.2 The dot product
 - 3.1.3 The vector cross product
 - 3.1.4 Multiple products
- 3.2 Vector calculus
 - 3.2.1 Divergence
 - 3.2.2 The divergence in electrostatics
 - 3.2.3 Curl
 - 3.2.4 The curl in electrostatics
 - 3.2.5 The gradient
 - 3.2.6 An application of the gradient
 - 3.2.7 Summary of vector calculus identities
 - 3.2.8 Nabla – or del notation
- 3.3 Vector differential operators in various co-ordinate systems
 - 3.3.1 Cartesian co-ordinates
 - 3.3.2 Cylindrical polar co-ordinates
 - 3.3.3 Spherical polar co-ordinates

4 Electrostatics II

- 4.1 Summary of properties of \mathbf{E}
- 4.2 The equations of Poisson and Laplace
- 4.3 Physical meaning of ∇^2
- 4.4 Properties of conductors
 - 4.4.1 There is no \mathbf{E} field inside a conductor
 - 4.4.2 Excess charge resides only on the surface
 - 4.4.3 Potential V is constant within a conductor
 - 4.4.4 The external \mathbf{E} field is normal to the surface
 - 4.4.5 At the surface $E_n = \sigma/\epsilon_0$
 - 4.4.6 In a hole the electric field is zero
- 4.5 Validity of the inverse square law
- 4.6 Summary of electrostatics results

5 Steady currents

- 5.1 Current density vector
- 5.2 Equation of continuity
- 5.3 Conductivity
- 5.4 Ohm's law
- 5.5 Power dissipation
- 5.6 Kirchhoff's laws
 - 5.6.1 Current law
 - 5.6.2 Voltage law
- 5.7 Laplace's equation in conductors
- 5.8 Anisotropic media and tensors

6 Magnetic effects of currents

- 6.1 Ampère's investigations
- 6.2 Magnetic field
- 6.3 Field of a long wire
- 6.4 Force between two long parallel wires
- 6.5 The Lorentz force
- 6.6 Ampère's law
- 6.7 The curl of \mathbf{B}
- 6.8 The divergence of \mathbf{B}

7 Maxwell's equations

- 7.1 The story so far
- 7.2 Faraday's law
- 7.3 Displacement current
- 7.4 Maxwell's equations
- 7.5 EM waves in free space
- 7.6 Poynting's theorem – energy transport
- 7.7 Incompatibility between Maxwell's equations and Newton's laws
 - 7.7.1 Transformation of co-ordinates and fields
 - 7.7.2 Transformation of a Maxwell equation
 - 7.7.3 The Lorentz transformation

8 Elementary electrodynamics

- 8.1 Motion of a charge in an electric field
- 8.2 Motion of a charge in a magnetic field
- 8.3 The cyclotron
- 8.4 The magnetron
- 8.5 Velocity selector
- 8.6 Flux encircled by a trajectory
- 8.7 The magnetic mirror

9 Inductance and magnetic fields

- 9.1 Field in a solenoid
- 9.2 Magnetic vector potential
- 9.3 Fields from potentials
- 9.4 Self inductance
- 9.5 Mutual inductance
- 9.6 Coupling coefficient and matrix representation
- 9.7 Energy of a magnetic field
- 9.8 Finding the potentials
- 9.9 Summary of magnetostatics results

10 Electric fields and matter

- 10.1 Dielectrics and dipoles
- 10.2 Electric potential of a dipole
- 10.3 Electric field of a dipole
- 10.4 Dipole in a uniform \mathbf{E} field
- 10.5 Dipole in a non-uniform \mathbf{E} field
- 10.6 Free and bound charge
- 10.7 Bound surface charge density
- 10.8 Bound volume charge density
- 10.9 Gauss's law including dielectrics
- 10.10 Fields in matter
- 10.11 Dielectric constant and electric susceptibility
- 10.12 Fields at boundaries
- 10.13 Coulomb's law revisited
- 10.14 Comparison of dielectrics and free space

11 *Magnetic fields and matter*

- 11.1 Magnetic media and (magnetic) dipoles
- 11.2 Diamagnetism and paramagnetism
- 11.3 Ferromagnetism
- 11.4 Bound surface current
- 11.5 Bound volume current
- 11.6 Ampère's law including magnetism
- 11.7 Displacement current
- 11.8 Macroscopic Maxwell equations
- 11.9 Magnetic susceptibility and permeability
- 11.10 Measuring **B** and **H**
- 11.11 Properties of ferromagnets
- 11.12 Boundary conditions
- 11.13 EM waves in matter
- 11.14 Macroscopic and microscopic fields
